

Scissor Cleaning

Equipment

- Wire Brush
- Scissor jar with lid
- Isopropyl Alcohol
- Micro fibre cloth to dry
- CRC oil spray
- Micro fibre cloth to cover evenly with CRC and remove excess.

Notes

- Do **NOT** put bleach or hydrogen peroxide/ H2O2 on metal scissors – it is corrosive and ruins the blades.
- Ensure Isopropyl is fully sealed at all times, it is quick to evaporate. Top up the jar to the tops of the blades from time to time as the level goes down.

Procedure

- **Action:** Dry scrub with Wire Brush to get the thick resin off blades.
- **Wait:** Soak overnight in scissor jar submerged in 100% Isopropyl, with lid **sealed**.
- **Action:** Scrub again with wire brush to remove residue.
- **Action:** Dry with microfibre cloth
- **Restore:** Lubricate hinge, spring and blade with CRC.
