

Bucking and Trimming

Preparation

- Check whether Hand Trimming or Machine Trimming is required
- Handle plants/flowers gently to avoid trichome damage, which affects product quality.
- Ensure plant is dry to 64-68% moisture before bucking
- Ensure to use nitrile gloves
- Clean and Sanitise scissors
- Notify "Team Lead" if any signs of mold or insects are found

Bucking

- Using the red scissors, cut off all flowers large than a 5 cent coin from the main branches
- Ensure the flowers go into a 100litre container with white terlock bag liner.

Machine Trimming

- Ensure plant is dry to 64-68% moisture before trimming, rehydrate overnight if too dry.
- Turn on the trimmer and leaf extraction motor, set rotation on trimmer to 20.0
- Ensure container with white terlock liner is at the end of trimmer
- Place a handful of flower into the trimmer every minute
- Fold the terlock liner over itself when full and seal in a 100 liter black container.
- Stack containers 1.5 meters high

Quality Control

- Remove any fan leaves, brown leaves, pieces of stalk or shake from the end product.
